1986 Annual Production Statistics Report

CRUDE OIL PRODUCTION – 1986	823 321.9 m^3
AVERAGE DAILY PRODUCTION – 1986	2 255.7 m^3
TOTAL CUMULATIVE PRODUCTION – DECEMBER 31, 1986	24 848 169.8 m^3
WELLS ON PRODUCTION – DECEMBER 31, 1986	1 367
WELLS CAPABLE OF PRODUCTION – DECEMBER 31, 1986	1 592

Current Users

Users familiar with this publication will recognize a major change in the format of this annual edition. The changes were made to take advantage of automated systems available for this purpose and to reduce printing costs.

Another change with this annual edition is in the use of the January 1, 1987 field/pool designations throughout. In previous issues the use of current year designations made cross-referencing monthly reports in the following year more difficult.

New Users

The Annual Production Statistics Report is printed in a field/pool code format. That is, all wells are grouped by the field in which they are located and by the pool from which they produce or to which they dispose or inject. Within each pool unitized operations (listed numerically) are shown first followed by the non-unit wells within the pool, grouped by operator (listed alphabetically). The field/pool designations used in this publication were effective as of January 1, 1987. Users familiar with the pre-1983 format can use the map and table on the following pages to cross-reference the previous field designation with the field/pool code format.

Throughout the publication the oil production figure is shown immediately above the salt water production figure. All volumes are expressed in cubic metres.

All production from confidential wells is shown as a total number only. Individual confidential wells are not shown.

A Pool Location Map, at a scale of 1:125 000, showing all designated Fields, Pools and well locations is available from the Petroleum Division, Manitoba Energy and Mines.

Should you have any question or comments about this publication please contact Brad Thiessen at (204) 945-6571.
